Flugga Boats on FuelMag

After recognising fuel contamination problems common in the marine industry as the cause of many breakdown issues, we at Flugga Boats needed a permanent solution to the problem, our boats are working boats so time is money for our customers. For quite some time our only answer to these problems was the same as for others, ie to use additives; chemicals added to the fuel to kill the bacteria causing the contamination. While it killed most bacteria, it also caused a build up of toxic sludge inside the fuel tanks. Added to this, over the years these additives have been decreasing in availability due to rules governing the use and disposal of toxic chemicals.

Our research for an alternative solution lead us to FuelMag, a one time fit, no maintenance solution. Simply by installing FuelMag to all our boats as, we have for the past several years, we have found the problem of breakdown and filter blockage due to contaminated fuel no longer exists. NOW it is our policy to fit the FuelMag in anything we fit a diesel engine onto, be it a boat engine, generator or salmon feeder.. The fact that it is an easy fit-and-forget solution that does what it says means it is also a very cost effective solution for us and we would confidently recommend it as a permanent solution to management of diesel contamination.

Yours faithfully

Jack Barclay
